High Performance Bus Interface Solutions

CPCI-16AI64

*64-Channel, 16-Bit Analog Input CPCI Board
With 300 KSPS Input Sample Rate*

Features Include:

- 64 Single-ended or 32 Differential 16-Bit Scanned Analog Input Channels
- Sample Rates to 300K-Samples per Second;
- Up to 75KSPS per channel in Scan Mode, 300KSPS in Single-Channel Mode
- Input Ranges Selectable as $\pm 10V$, $\pm 5V$ or $\pm 2.5V$
- Data Buffered through a 64K-sample FIFO?
- Continuous and Burst (One-Shot) Input Modes
- Sync Input/Output (Alternate Function for Channels 62,63) ;
- Scan Sizes from 4 to 64 Channels-per-Scan; or Single-Channel sampling of any Channel
- Internal Rate Generator Implements a 32-Bit Divider
- Scan Rates Adjustable from 0.01 to 75K Scans-per-Second
- Internal Autocalibration upon command
- DMA Engine Minimizes Host I/O Overhead
- Each Input Channel Buffered for Minimum Crosstalk and Input Bias Current
- Completely Software-Configurable; No Field Jumpers
- Single-width CPCI Form Factor
- Optional EMI Shield and Panel Bezel Available

Applications Include:

- | | | |
|----------------------------|-----------------------|------------------------------|
| ✓ Acoustics Analysis | ✓ Voltage Measurement | ✓ Automatic Test Equipment |
| ✓ Analog Inputs | ✓ Process Monitoring | ✓ Audio Waveform Analysis |
| ✓ Data Acquisition Systems | ✓ Industrial Robotics | ✓ Environmental Test Systems |

High Performance Bus Interface Solutions

Overview:

The CPCI-16AI64 board provides cost effective 300,000 samples-per-second 16-bit analog input capability in a single-width CPCI format. The inputs are configurable either as 64 single-ended channels or as 32 differential channels, and the input range can be software-selectable as $\pm 10V$, $\pm 5V$ or $\pm 2.5V$. Scan rates can be controlled from (a) an internal rate generator, (b) through an external digital input, or (c) by direct software commands. Multiple CPCI-16AI64 boards can be connected together for synchronous scanning. Data is buffered through a 64K-sample FIFO. Internal autocalibration networks permit calibration to be performed without removing the board from the system.

Functional Description:

The CPCI-16AI64 board is a scanning analog digitizer that performs high-speed sampling and 16-bit A/D conversion of as many as 64 single-ended or 32 differential analog input channels. The resulting 16-bit sampled data is available to the PCI bus through a 64K-Sample FIFO buffer. All operational parameters are software configurable.

The analog inputs can be sampled in scans of 4, 8, 16, 32 or 64 single-ended channels, or in scans of 4, 8, 16 or 32 differential channels. The scan rate can be controlled internally up to 75,000 scans per second, or any single channel can be sampled at 300,000 samples per second. A Sync input/output signal can replace Channels 62,63 to permit multiple boards to perform synchronous scanning. All inputs are buffered to avoid the high cross talk and input bias currents common with nonbuffered multiplexers.

The internal auto calibration utility uses hardware D/A converters to correct for offset and gain errors in the input signal path, and eliminates the missing codes that are inevitably introduced when software correction methods are used. A selftest switching network routes calibration signals through the input multiplexer to the A/D converter to support internal auto calibration, and permits board integrity to be verified by the host. Auto calibration is performed automatically after reset or upon demand from the PCI bus, and calibrates the offset and gain of the converter to a precision internal reference voltage.

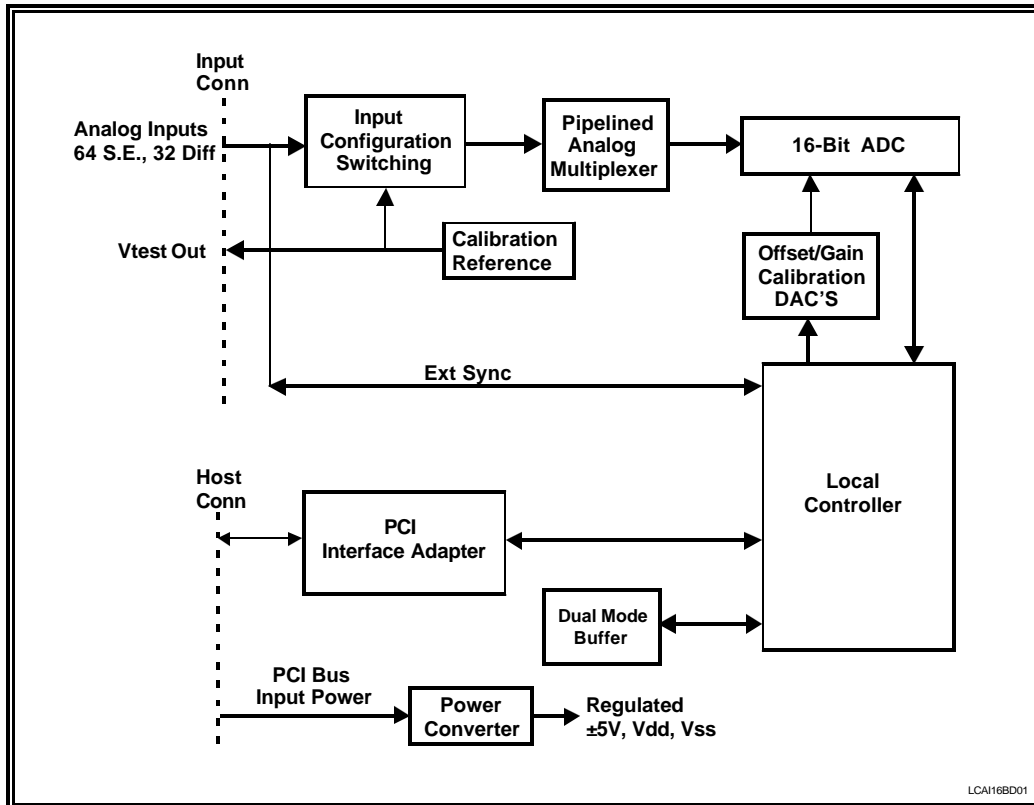

Figure 1. CPCI-16AI64; Functional Organization

The board is functionally compatible with the IEEE PCI local bus specification Revision 2.1, and supports the "plug-n-play" initialization concept. System connections are made at the front panel through a high-density 68-pin connector. Power requirements consist of +5 VDC, in compliance with the PCI specification, and operation over the specified temperature range is achieved with conventional convection cooling.

ELECTRICAL SPECIFICATIONS

At +25 °C, with specified operating voltages

□ Input Characteristics:

| | |
|-------------------------|---|
| Configuration: | 64 single-ended or 32 differential analog input channels |
| Voltage Ranges: | Software configurable as ± 10 Volts, ± 5 Volts or ± 2.5 Volts; or optionally factory configured for a fixed range of ± 10 Volts, ± 5 Volts or ± 2.5 Volts |
| Input Impedance: | 1.0 Megohm typical. |
| Common Mode Rejection: | 60 dB typical, DC-60 Hz (Differential inputs) |
| Common Mode Range: | Same as selected voltage range, with zero normal mode signal (Diff inputs) |
| Bias Current: | Less than 80 nanoamps |
| Crosstalk Rejection: | 85dB typical, DC-10kHz |
| Overvoltage Protection: | ± 30 Volts with power applied*; ± 15 Volts with power removed. |

* Inputs 62,63 (Alternate function TTL Sync I/O) limited to -0.5 to +7.0 Volts

□ Transfer Characteristics:

| Resolution: | 16 Bits (0.0015 percent of FSR) | | | | | | | | | | | | |
|--|---|--------------------------|-------------------|--------------------------|-----------|-----------|-----------|----------|-----------|-----------|------------|-----------|-----------|
| Maximum Sample Rate: | 300K conversions per second | | | | | | | | | | | | |
| Scan Rate: | Adjustable internally from 0.01 to 75K scans per second; 300KSPS in single-channel mode. | | | | | | | | | | | | |
| Channels per scan: | 8, 16, 32 or 64 Single-ended channels; 4, 8, 16 or 32 differential channels. Or, one channel in single-channel mode. | | | | | | | | | | | | |
| DC Accuracy: (Maximum composite error after autocalibration) | <table><thead><tr><th>Range</th><th>Midscale Accuracy</th><th>\pmFullscale Accuracy</th></tr></thead><tbody><tr><td>$\pm 10V$</td><td>$\pm 3mv$</td><td>$\pm 4mv$</td></tr><tr><td>$\pm 5V$</td><td>$\pm 2mv$</td><td>$\pm 3mv$</td></tr><tr><td>$\pm 2.5V$</td><td>$\pm 1mv$</td><td>$\pm 2mv$</td></tr></tbody></table> | Range | Midscale Accuracy | \pm Fullscale Accuracy | $\pm 10V$ | $\pm 3mv$ | $\pm 4mv$ | $\pm 5V$ | $\pm 2mv$ | $\pm 3mv$ | $\pm 2.5V$ | $\pm 1mv$ | $\pm 2mv$ |

channel mode. External triggering is available through Channel 62,63 pins.
Input Data Format: Selectable as offset binary or as two's complement

PCI INTERFACE

- ❑ **Compatibility:** Conforms to PCI Specification 2.1, with D32 read/write transactions.
Supports "plug-n-play" initialization.
Provides one multifunction interrupt.
Supports DMA transfers as bus master.

MECHANICAL AND ENVIRONMENTAL SPECIFICATIONS

❑ Power Requirements

+5VDC \pm 0.2 VDC at 1.5 Amp, maximum

Maximum Power Dissipation: 6.0 Watts, Side 1
1.0 Watt, Side 2

❑ Physical Characteristics

Height: 13.5 mm (0.53 in)
Depth: 149.0 mm (5.87 in)
Width: 74.0 mm (2.91 in)
Shield: Side 1 can be protected by an optional EMI shield.

❑ Environmental Specifications

Ambient Temperature Range: Operating: 0 to +55 degrees Celsius
Storage: -40 to +85 degrees Celsius
Relative Humidity: Operating: 0 to 80%, non-condensing
Storage: 0 to 95%, non-condensing
Altitude: Operation to 10,000 ft.
Cooling: Conventional convection cooling
