Linearized Thermocouple Input

A5B47 modules plug into a backpanel to provide a single channel of analog input which is linearized, filtered, isolated, amplified, and converted to a proportional DC voltage output signal.

These input modules are similar to the A5B37 modules, but add thermocouple signal lineariza-tion.   Each module is cold junction compensated to correct for parasitic thermocouples formed by the thermocouple wire and the screw terminals on the mounting backpanel. Upscale open thermocouple detect is provided by an internal pull-up resistor.

■ User's Manual

8500-299
A5B User's Manual. Acromag provides (1) manual with first purchase order at NO CHARGE. Additional manuals must be purchased. The first manual must be specified on the purchase order to ensure delivery.

■ Backpanels

APB01
16-channel, non-multiplexed backpanel. Non-addressable analog I/O signal channels provide each module with its own analog bus. The module output switch is continuously "on" when using this backpanel. A temperature sensor is mounted on each channel to provide cold junction compensation for thermocouple modules. Field connections are terminated with four screw terminals at each module site.

APB02
16-channel, multiplexed backpanel. Has two analog buses; one for input, one for output. Two-bus configuration takes advantage of the switch-controlled outputs on the input modules and the track-and-hold inputs on the output modules. Up to four APBO2 backpanels can be daisy-chained. Includes temperature sensor and four screw terminals at each module site.

APB03
Single channel, non-multiplexed backpanel. See tables below for additional parts required.

APB04
Dual channel, non-multiplexed backpanel. See tables below for additional parts required.

The following parts are required for DIN rail mounting of one APB03 or APB04 backpanel:

Quantity	Part No.	Description
