➤ Embedded Technology eXtended

- Reduced power consumption
- Highly integrated
- Scalable and interchangeable

Product Overview

The new **ETX-P3E** component SBC module supports Intel® Mobile Pentium® III and Celeron™ processors (300/ 400/ 500/ 700 MHz) processor. Reduced power consumption is achieved using both ACPI and APM 1.2 for power management. With the VIA VT8603/ VT82C686A as the core chip set, the **ETX-P3E** provides both S3 Savage4 graphics and VIA enhanced audio. In addition to standard ETX features, the **ETX-P3E** supports four USB ports, up to 512MB SDRAM, 10/ 100Base-T Ethernet, keyboard/ mouse controllers, real-time clock, and watchdog timer. ETX modules are like components, plugging in to an application-specific baseboard. The ETX modules supply

the core CPU and memory subsystems together with sound, SVGA, Ethernet and standard PC I/O. They connect to the rest of the embedded system through high-density, low profile, surface-mount connectors, which carry both ISA and PCI bus signals as well as dedicated I/O interfaces. The mechanics of the interconnection is such that an ETX/ baseboard combination is virtually the same as height a one-board solution. ETX modules are scaleable and interchangeable, and they make possible the rapid development of semi-custom solutions for embedded applications.
