

VH-50R

With its installation system, the **VH-50R** can be easily reached for possible maintenance.

The **VH-50R** is based on the Intel PXA 255 processor, well known for being adopted by several Pocket PC manufactures. Its major features are very low power consumption with very low heat dissipation.

Thanks to these characteristics, the **VH-50R** can be used in applications where no ventilation is possible, such as a domestic home control panel, where the touch-screen panel is mounted in a wall.

For Home and Building applications a special plastic box from Bticino is provided for correct wall install installation.
