➤ First class performance AMC module

Kontron's AdvancedMC processor module AM4010 provides outstanding performance in conjunction with comprehensive AMC interconnect capabilities designed according to the PICMG specifications AMC.0, AMC.1, AMC.2, AMC.3.

➤ Ultra Performance

The AM4010 is a highly integrated CPU board implemented as a Single Mid-size or Full-size Advanced Mezzanine Card (AMC) Module. The design is based on the Intel® Core™ Duo and the Intel® Core™ 2 Duo processors combined with the Intel® 3100 server-class chipset. The board is capable of supporting the Intel® Core™ Duo and the Intel® Core™ 2 Duo processor versions in 65 nm technology with 64 kB L1 and up to 4 MB L2 cache in a 479 FCBGA package with frequencies ranging from 1.2 GHz up to 1.66 GHz providing up to 667 MHz front side bus (FSB) speed.

➤ Ultra Capacity

The board includes up to 4 GB registered Double Data Rate (DDR2) memory with Error Checking and Correcting (ECC) running at 400 MHz. Two dual Gigabit Ethernet controllers each utilizing a x4 lane PCI Express inter-connection to the Intel® 3100 chipset ensure maximum data throughput between processor and memory. The AM4010 further provides up to 4 GB Flash memory via a USB 2.0 NAND Flash Controller.

➤ Ultra Flexibility

Supporting the PICMG sub-specifications AMC.1/2/3 the AM4010 ensures a comprehensive set of interconnecting capabilities to the AMC Carrier. A x4 PCI Express lane according to AMC.1 guarantees high throughput for I/O intensive applications. The dual Gigabit Ethernet controller realizing the AMC.2 interconnect utilizes a x4 lane PCI Express interface to the 3100 chipset ensuring maximum packet performance. Two SATA ports compliant to AMC.3 allow flexible usage models of the AM4010 depending on the application requirements.

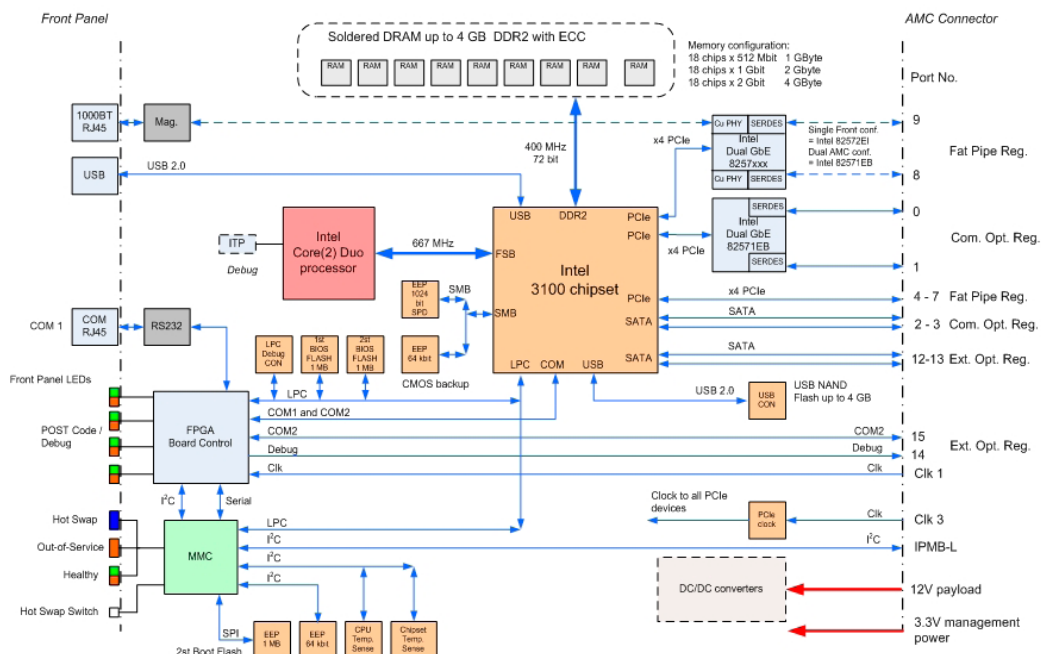

➤ AMC everywhere

A comprehensive range of 'AMC everywhere' ATCA boards, such as ATCA carrier boards, CPU and hub boards are complementing Kontron's AMC product portfolio including the AM4010 module. Optimized for high-performance, packetbased telecom systems, the AM4010 is targeted towards, but not limited to telecom applications such as radio network controllers, storage control, routing and switching solutions in ATCA systems. Beyond the usage in ATCA systems the AM4010 complies to the newly specified TCA standard dedicated for cost optimized communication applications.

➤ Reliability

The careful design and selection of high temperature resistant components together with the elaborated heat sink construction ensures a high product availability. This, along with a high level of scalability, reliability, and stability, makes this state-of-the-art product a perfect core technology for long-life embedded applications.
