GENOS SERIES

High quality·stability·productivity

Abundant spec variations

▶ Global CNC Lathes

L250

STD+M,MY

L250E

STD+M,MY

L400

STD+M,MY,MW

L400E

STD+M,MY

High quality, Easy to use, Simple machine structure

■ Main spindle

High speed, high rigidity gearless spindle minimizes vibration and heat.

- **ø100 spindle specs (GENOS L250/L200-M)**
Spindle speed: 4,500 min⁻¹
Output: VAC 7.5/5.5 kW (10/7.5 hp) (30 min/cont)
Torque: 85 N·m (62 ft-lbf)
- **ø120 spindle specs (GENOS L400/L300-M)**
Spindle speed: 3,000 min⁻¹
Output: VAC 11/7.5 kW (15/10 hp) (30 min/cont)
Torque: 417 N·m (307 ft-lbf)

■ Turret

V8, V12(option)

NC Turret (option)
Compact turret with a servo motor drive and 3-piece coupling clutch.(index time 0.3sec)

■ Bed

Solid cast iron provides superior rigidity, long service life and minimal thermal deviation.

Basic structure

■ Accuracy (example)

Surface roughness

- 0.6 μm 2,000 min⁻¹(rpm)
- Material: BSB

Roundness

- 1.0 μm 1,500 min⁻¹
- Material: BSB

■ X , Z-axis

- Rapid traverse (X:20 m/min, Z:25 m/min)
- High-rigidity and Hardened rectangular slideways.
- Preloaded Ball-screw for minimal Thermal Deflection.

■ Tailstock

MT N0.5

Rugged tailstock with ø 90mm quill.

■ OSP P200L-R

User-friendly latest controller with advanced machining applications.

Greater efficiency with variable functions

M Function (M)

Turret

Compact turret with PREX motor
Rigid multitasking V12 NC turret

- 0.1 sec/index
- L/M 12 tools
- VDI quick-change tooling system
- Axial tooling system

Milling tool spindle (GENOS L200-M)

Spindle speed: 6,000 min⁻¹
Output: PREX 4.0/1.8 kW (25 min/cont)
Torque: 15 N-m (11 ft-lbf)

C-axis

Fast, high-precision C-axis headstock

- 200min⁻¹ high-speed traverse
- Positioning accuracy : ± 0.015°
- Repeatability : ± 0.007°

Milling tool spindle (GENOS L300-M)

Spindle speed: 4,500 min⁻¹
Output: PREX 7.0/3.3 kW (30 min/cont)
Torque: 24 N-m (18 ft-lbf)

L200-M / L300-M Machining capacity (example)

- Endmill ø13 [ø20]
- Drill ø13 [ø14] carbide drill
- TAP M10XP1.5 [M16XP2.0]
- * Workpiece : S45C []; L300-M

Y-axis (MY)

Basic structure for Y-axis

A variety of milling operations can be accommodated with high-accuracy, wide-range Y-axis travel using a double slide system. Achieves complete multitasking with a single chucking.

Travels

GENOS L200-MY: 80 mm
(+30 to -50)
GENOS L300-MY : 100 mm
(+50 to -50)

W-axis / sub-spindle (MW)

ø80 spindle specs (GENOS L300-MW)

Spindle speed: 6,000 min⁻¹
Output: VAC 7.5/5.5 kW (10/7.5 hp) (30 min/cont)
Torque: 48 N-m (35 ft-lbf)

Turret

- Compact milling spindle uses high power, high torque PREX motor for much faster multitasking operations.
- Radial tooling system

Sub-spindle (Built-in)

With these sub-spindle specifications, front and back machining can be done on a single lathe. Interference is not a worry even in back face machining with a multitasking V12 radial turret.

Spec extensions

Model	Spindle	Maximum machining length	Optional specs (○ → available)		
			Multitasking (M fuction)	Y axis	Sub-spindle (W axis)
GENOS L250/250E	A2-6	290/500	—	—	—
GENOS L200-M/L200E-M	[7.5/5.5 kW] (10/7.5 hp)	225/380	Ⓜ	ⓂY	—
GENOS L400/L400E	A2-8	500/1,100	—	—	—
GENOS L300-M/L300E-M	[11/7.5 kW] (15/10 hp)	450/1,060	Ⓜ	ⓂY	ⓂW*

- GENOS L250/E + M → GENOS L200/E-M
- GENOS L400/E + M → GENOS L300/E-M

* Max machining length becomes 150 mm

With the GENOS L series you can machine workpieces like these.

Line-up High Productive Automatic System

CNC for the New Era **OSP-P200L** Okuma Sampling Path Control

Loader

L250 1 set+ gantry loader
(1M 1L system)

L250 2 sets+ gantry loader
(2M 1L system)

Loader Specs Example

1-machine/1-loader cell

2-machines/1-loader cell

2-machines/2-loaders cell

- **Gantry loader specification**
Workpiece: $\phi 120 \times 80L$
Weight for flange: 3kg
shaft: 2kg
- **Work table specification**
Pallet set: 6~10P
Workpiece Size: $\phi 20 \sim 150mm$
Stack High: 350mm

Barfeeder

Bar size	
L250 / E	$\phi 50mm$ (Max)
L200 / E-M	$\phi 50mm$ (Max)
L400 / E	$\phi 68mm$ (Max)
L300 / E-M	$\phi 68mm$ (Max)

* Above specs. to discuss with our sales engineer.

An OSP / Windows® Collaboration

■ Touch panel

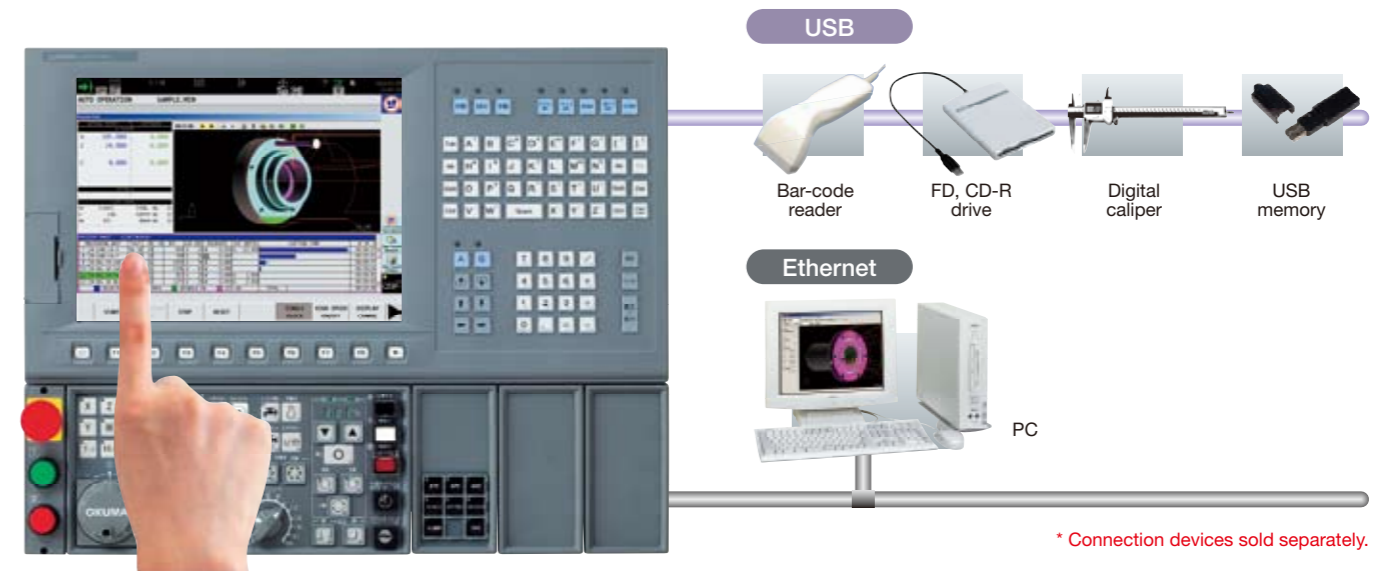

Data can be directly manipulated, greatly improving operability. High-durability panel is resistant to dirt and scratching

■ USB ports

2 ports are standard. Various devices can be connected for each purpose, including USB memory to transfer large program file and bar code reader for production management.

■ Ethernet

Machining programs can be downloaded and uploaded from and to server via Ethernet that is standard equipment.

* Connection devices sold separately.

■ The advanced architecture

Windows® and Real-Time OS on a single high-performance NC computer synergistically improve operation.

For example, with the Collision Avoidance System for collision-free machining, the time from detection of a collision (processed on Windows) to machine stoppage (processed on Real-Time OS) is only 0.01 seconds. At a speed of 12 m/min, hairbreadth stops with a stopping distance of less than 2 mm are possible.

■ A high-performance NC computer in a flat panel

Gives high reliability for machine control and data protection in harsh environments.

- Main memory with ECC
- Vibration proof hard disk drive

Windows®-based Applications		Machine Control Function	
Windows®		Real-Time OS

Hi-tech Okuma mechatronics for advanced machining applications

Variable spindle speed control (Optional)

Reduce machining chatter

Holds down machining chatter as spindle speed is periodically changed and resonance points change, when cutting large, thin workpieces or small-diameter, long workpieces.

L/D = 18 is machined without steadyrest

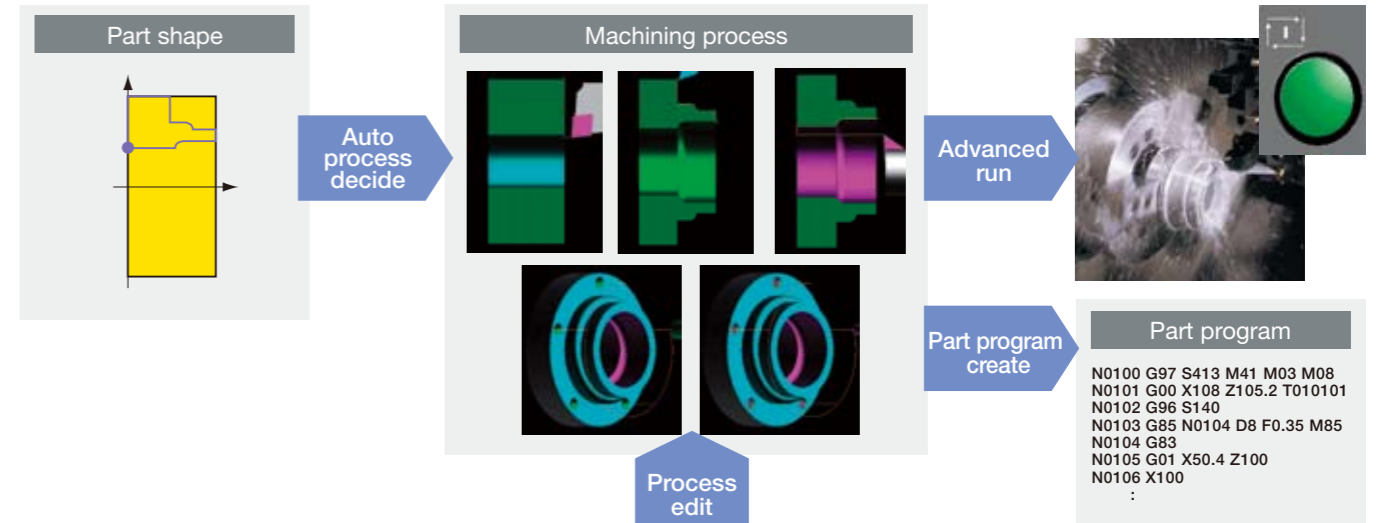

Real 3-D simulation (Optional)

Live-performance machining

In all operating modes (auto, MDI, manual, etc), the cutting conditions are displayed in real time. Switching between solids, section views, transparent models, and performing machining simulation (dry runs with the machine locked) lets you check part program accuracy.

Interactive operations Advanced One-Touch IGF-L (Optional)

Part program create

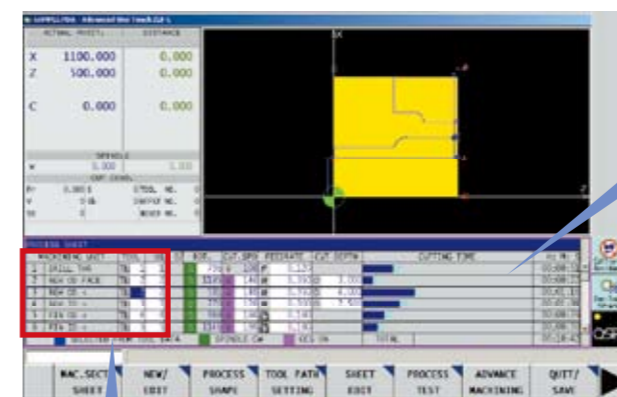

After simple cutting data inputs (interactively), the required machining processes are determined and a part program is created (automatically).

Advanced run

To run the machine directly from the interactive part program screen. When a problem is detected it can be quickly corrected and checked, speeding up first part machining.

One touch editing

G/M programs can be edited with a single touch on the shop floor. Editing can be started immediately by moving the cursor to the program execution block or the block that produced an alarm during machining in automatic operation mode.

Directly change cutting conditions for each process with this process sheet

Tables make it easy to make mid-cycle or individual process starts

OSP-P200L-R CNC Optional Specifications

Features	Axis control	X, Z simultaneous 2-axis running, X, Z, C simultaneous 3-axis multi-processing
	Position feedback	Full range absolute position (zero point return not required)
	Tape format	N4.G3, X+53, Z+53, I+53, K+53, F+53, S4, T6, M3
	RS-232C interface	RS-232C interface, 1 channel
	Programming	Auto ISO/EIA code recognition, absolute, incremental or both
	Min command units	X-axis: 1μm(dia) Z-axis: 1μm C-axis: 0.001"
	Max command units	8-digit decimal, ±99999.999mm
	Programmable units	Freely selectable: 1μm, 10μm, 1mm
	Decimal point data	1μm, 10μm, 1mm increments
	Feedrates feed	Feedrates are listed in the machine specs; override: 0~200%, dwell: 0.01~99999.99 sec.
	Tooling	Tool selection: 8/12 sets, tool offset(compensation): 32 sets, max compensation value: ±99999.999 mm Auto tool compensation: calculated from manually input wear and tear measurement values
	Spindle VAC motor operation	Direct spindle speed commands (S4), fixed cutting speed Spindle speed override (50~200%), optimum turing speed designation
	M-spindle motor operation (multi-machining)	Direct motor speed input
	Display	15" Color display panel, touch panel.
	Manual operation	Spindle (inching, CW, CCW), tool rotation, pulse handle, X/Z-axis manual feed
	Multitasking	Program writing, editing during work
	Self-diagnostics	Automatic diagnostics and display of program, operation, machine and NC system problems
	Door interlock	Safety function to interlock machine movement when the door is opened or closed
	NC torque limiter	Instant detection of machine collision to reduce machine damage
Hi-G control	Calculates of the speed control and torque properties of a motor for high-speed, high-stability positioning	
Other	Buffer resister, zero offset, tool interference, software limit, chuck barrier, turret barrier, droop control, single block machine lock, block delete, optional stop, dry-run, stroke end-limit cancel, etc.	
Operation	OSP-Win XP	Featuring easy-to-manipulate screen windows, Pop-up function displays, Quick closing windows.
	Sequence number search	Cursor advances to a specified sequence number in the selected program
	Sequence restart	Restart from an interrupted sequence
	Manual interrupt/auto return	Manual operation during automatic operation; return to interrupt point
	Threading slide hold	Slide hold during threading (optional for G34/G35 non-fixed cycles)
Output Management Function	Programming	Two programs can be edited simultaneously on one screen.
	Memory operation*	Tapeless operation: Program storage capacity:2GB, Operation backup capacity: 2MB
	Useful help	Alarm help, G/M-code help, variable help, operation help, diagram display
	PLC monitor	Display of PLC ladder drawings and PLC data
Programming Function	Display	Finished work list, operation results and alarm records
	External output	Output above items to a USB port.
	Nose R compensation	Auto compensation for nose R dimension errors including arbitrary shapes and arcs
	Arc radius designation	Circular interpolation by ordering the radius L and end points X and Z
	Arbitrary angle chamfering	Simple programming of arbitrary angle chamfers (C, R)
	Taper angle designation	Taper interpolation by designating either the X or Z-axis and the starting point angle
	mm/min (ipm) programming	Both mm/rev and mm/min feedrate units are possible
	Program schedule	Non-stop operation possible by setting the sequence order of several work programs
	Zero offsets via G-codes	Program zero point offsets are possible
	Threading	Thread lead: 0.001~1000.000mm; possible to set the threading lead pitch Chamfering on/off, fix cycle threading, non-fixed threading cycle (the thread lead indicates the CNC limit value, the max thread lead differs per machine specification)
	Custom fixed cycle	Threading cycle, grooving cycle, drilling cycle
	Fixed drilling cycle (multi-maching)	Drill, deep-hole drilling, boring, tapping (Synchronized Tapping)
	User task1	GOTO, IF statements, arithmetic, common variable, local variable, system operation variables
	Program notes	Comments can be added to programs

		Kit specifications			
		TE	TD	TEX	
Programming	User task2	Sub-programming, function operations, logic operations I/O variables can be used(each 8 points)	○	○	○
	Automatic programming (LAP4)	Add roughing conditions to finish programs for roughing to finish work optimized cutting by matching the best cutting mode with the material shape	○	○	○
	Inch/metric switching	Inch, metric switching possible Via parameters		○	○
	Arc threading	Threading possible along arc traces			
	Tool offset compensation	<input type="checkbox"/> 96 sets <input type="checkbox"/> 200 sets (Standard 32 sets)			
	Tool wear compensation	<input type="checkbox"/> 96 sets <input type="checkbox"/> 200 sets (Standard 32 sets)			
	Program storage (capacity)	Standard : 2GB Operation backup : 2MB	○	○	○
	Coordinate switching (multi-machining)	Programming possible by changing X, C-axes to X, Y-axis rectangular coordinate system	△	△	△
	Work generation (multi-mechining)	Programming X, C-axis lines as straight flat surfaces is easy	△	△	△
	Advance One touch IGF-L	Quick and simple: even operations without any NC knowledge can input a few keystrokes and be programming in on time Realistic 3D simulated test cut			
Monitoring	Real 3-D simulation	Real time simulation of all machining modes		○	○
	Condition display	Automatic operation, work completion, alarm conditions displayed with a 3-color (A-type) signal tower	○	○	○
	NC operation monitor	Display of cutting, operation, spindle speed, etc., on the CRT; workplace count-up	○	○	○
	NC work counter	Counts M30 occurrences (displayed on the CRT): alarm-stop at count-up	○	○	○
	Tool life management	Automatically calculates workpieces and cutting time, rotates a spare tool in when the set value for the tool life has been reached		○	○
	Load monitor	Load conditions are monitored and X, Z-axis and the spindle stop with an alarm			○
	Cycle time over check	An alarm occurs after the completion of a set cycle	○	○	○
	DNC-T1	Ethernet part program transfers	○	○	○
	DNC-T*	Personal computer DNC: Work program transfer, etc.			
	Auto work gauging/compensation	<input type="checkbox"/> Integral <input type="checkbox"/> External			
Gauging	Touch setter tool tip	<input type="checkbox"/> Manual <input type="checkbox"/> Automatic			
	Auto chuck open/close	Automatic chuck jaw open/close via M-codes (w/ chuck grip confirmation)			
	Chuck pressure switching	High/low switching via M-codes			
	Auto tailstock quill	Automatic tailstock quill via M-codes (w/ confirmation)			
	Tailstock quill pressure switching	High/low tailstock quill thrust switching with M-codes			
	Auto cover open/close	Auto cover open/close via M-codes (w/ interlock ON/OFF switch)			
	Air cleaner	An air blower is applied to the chuck area and the tailstock center via M-codes			
	Spindle orientation (Electric)	Stops the spindle at a designated position via M-codes:			○
	Extra M-codes	<input type="checkbox"/> 2 sets <input type="checkbox"/> 4 sets			
	Auto power shut-off	Power supply is shut off automatically according to M30 and alarm conditions			
Unattended Operation	Cycle time reduction	Possible to ignore a various of answers with M-codes	○	○	○
	Other*	<input type="checkbox"/> Chuck open/close during spindle rotation <input type="checkbox"/> Auto tailstock quill thrust during spindle rotation <input type="checkbox"/> Bar feeder interface <input type="checkbox"/> Loader interface
