### Introduction

The Advantech DSA-2100A Series Network Digital Signage Player receives media content such as video, audio, graphics, and text via an IP network, then stores the content on its internal hard disk drive. The content is displayed according to either a pre-defined playlist or network commands. The DSA-2100A series features the most advanced decoder and graphic processor available. It outputs both digital and analog video signals for modern, high definition display devices: plasma and LCD screens, and projectors. The DSA-2100A is an ideal network digital content player for advertising, presentations, training and other media applications.
