

Wide-input 2- and 3-output type bestseller power supply

TDK Switching Power Supply

# M SERIES MRW

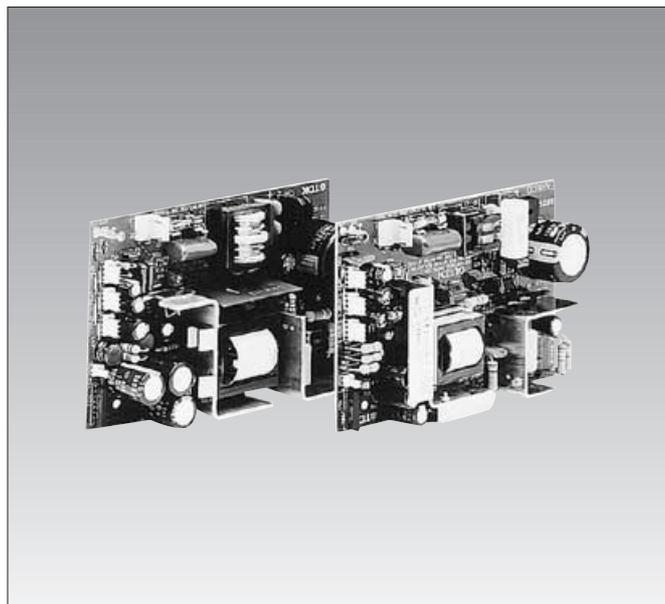

UL/CSA/TÜV approved

## [FEATURES]

- Wide-input (AC.100V/200V switching not required) thin-type multi-output power supply.
- Open frame type.
- POK signal function (MRW-150/-151/-160/-161).
- Low noise (FCC class B).

## [SUMMARY]

The M series MRW products are open-frame multi-output power supplies characterized by the wide input range and thin type. They are available at low prices and Safety standards certified with full EMC countermeasures. It is recommended to use them as economical export power supplies. In addition to the conventional products, the 170 series and 350 series are supported newly.

<sup>\*1</sup> Current rating(maximum output current) is determined for 0 to +50°C. Derating is required when used outside this temperature range.

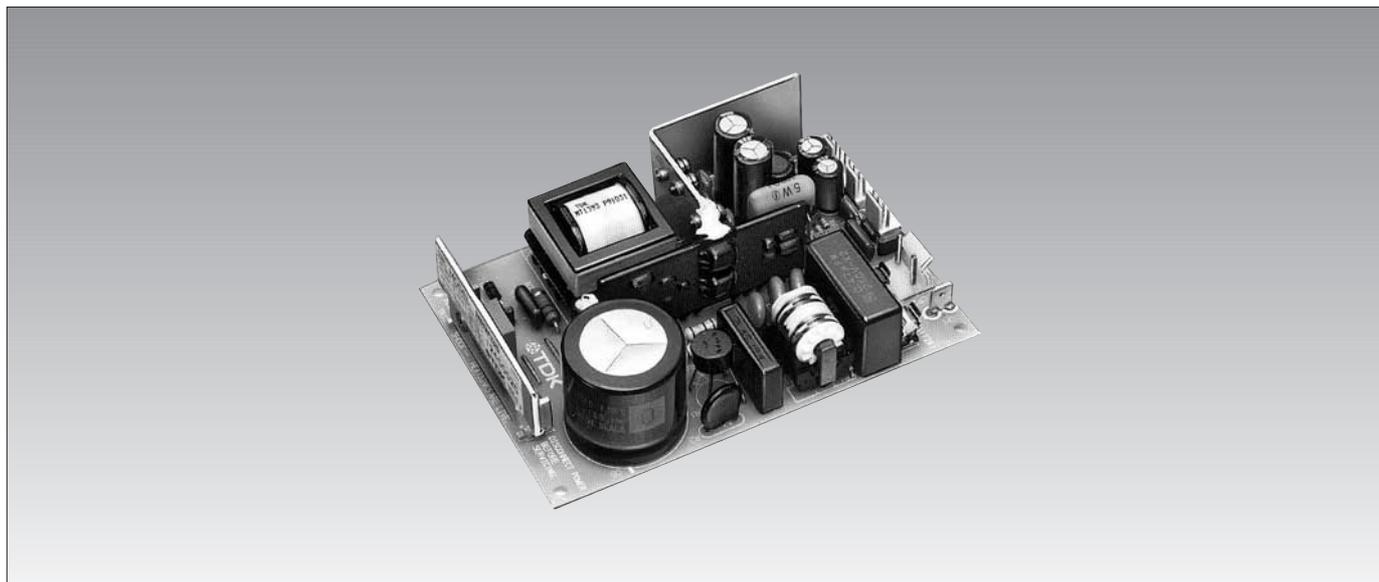

<sup>\*2</sup> Load variation only for an output to be measured with other outputs fixed to V<sub>1</sub> at 1.5A and V<sub>2</sub> at 1.5A.

<sup>\*3</sup> The output voltages V<sub>1</sub> and V<sub>2</sub> may not output regular voltages at the minimum output current or lower.

<sup>\*4</sup> If +12V load current exceeds 1.5A, the time should be limited to 3 sec or shorter with the effective current maintained at 1.5A or lower for use.

Safety standards	UL1950-3, CSA950-95(C-UL), EN60950(TÜV) approved.
Noise terminal voltage	FCC class B, VDE0871 class B compliant.

### CONSTRUCTIONS

External dimensions	mm	36.75×76×127[H×W×L]
Weight	g	240max.
Mounting method		1 side(Open frame)
Case and cover		—
Input and output cables		—

<sup>1</sup> Current rating(maximum output current) is determined for 0 to +50°C. Derating is required when used outside this temperature range.

<sup>2</sup> Normal output voltages might possibly not be maintained if outputs V<sub>2</sub>, V<sub>3</sub> fall below V<sub>1</sub> minimum current values.

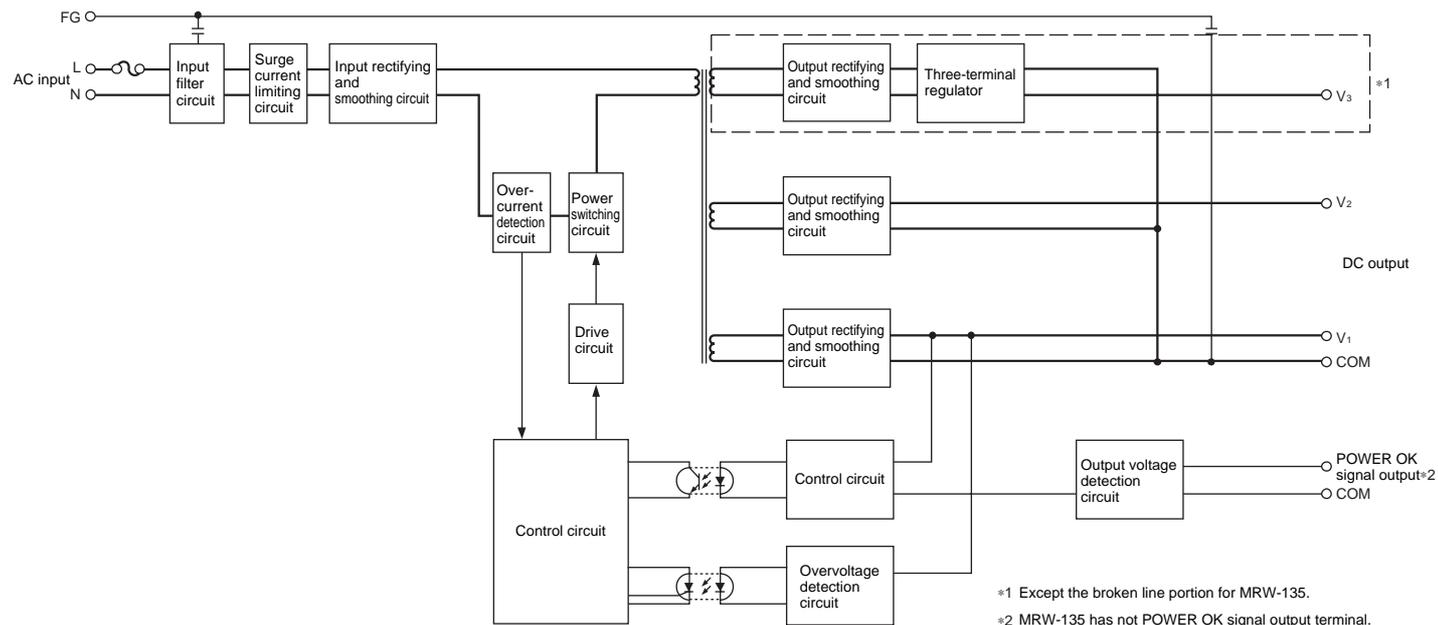

<sup>3</sup> Load variation will be specified from the minimum output current to the rated output current range.

#### 1 AC input terminals(L, N)

Connect to AC.100/120V or AC.200/240V single phase input line.

#### 2 Frame ground terminal(G)

Connect to earth ground. This is connected to the case.

#### 3 DC output terminals(V<sub>1</sub>, V<sub>2</sub>, V<sub>3</sub>)

Connect to load.

#### 4 DC output common terminal(COMMON)

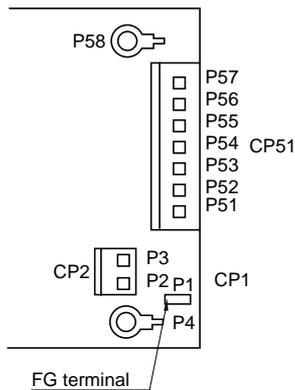

Connect to load.

#### 5 POWER OK signal output terminal (POWER OK SIGNAL)

Outputs the signal at 4.5V min. of the +5V output voltage (Applied to MRW-150, 151, 160, and 161).

## OUTPUT POWER-AMBIENT TEMPERATURE(DERATINGS)

## SURGE CURRENT, START UP TIME AND HOLD UP TIME TEMPERATURE: 25°C

## POWER OK SIGNAL

If the output voltage level of  $V_1$  (+5V) is 4.5V or higher, the POK (POWER OK SIGNAL) signal is outputted from the connector CP54.

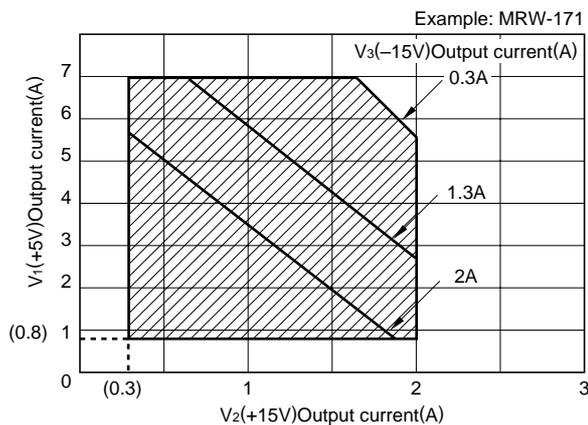

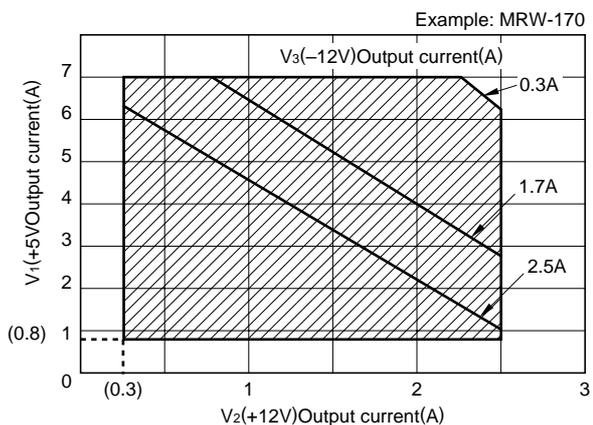

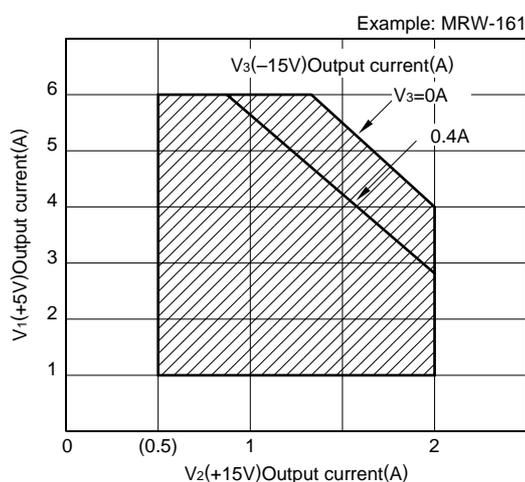

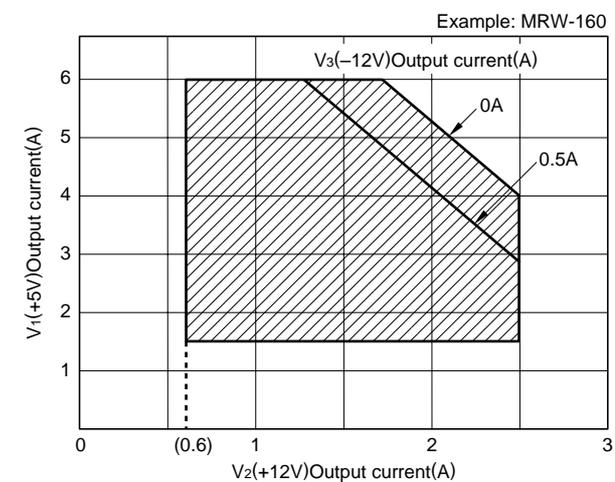

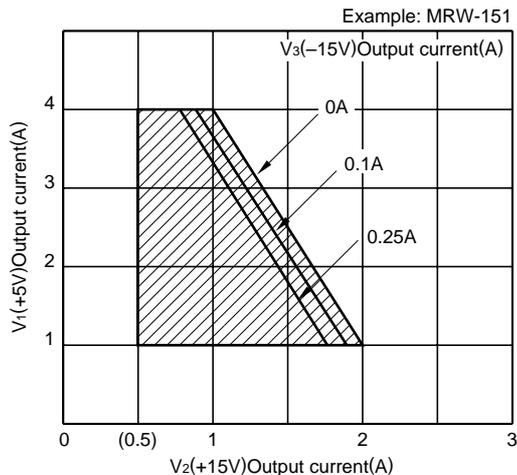

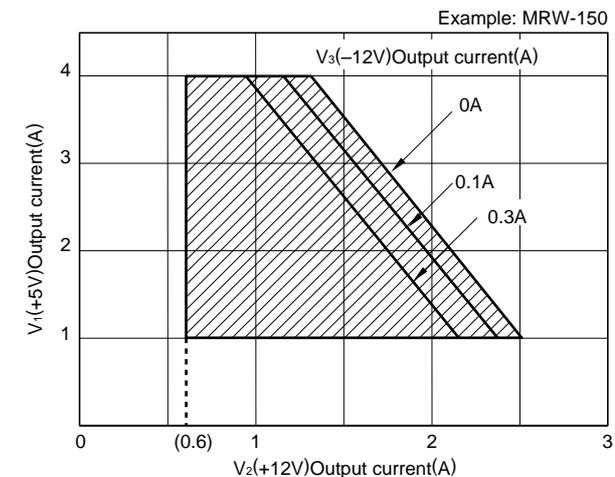

- The POK signal relates to an output voltage. An abnormality of an input voltage is not detected.

# Characteristics, Functions, and Applications

## OUTPUT CURRENT COMBINATION

Use the output currents within the shaded range.

# Characteristics, Functions, and Applications

## V2 (+12) OUTPUT PEAK CURRENT

While the peak current can be outputted at the V<sub>2</sub> (+12) output in the MRW-135, use it within the range described below.

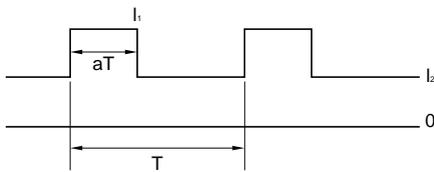

### MRW-135

If the 12V output exceeds 1.5A, the time should be 3 sec max. and the effective current be 1.5A max.

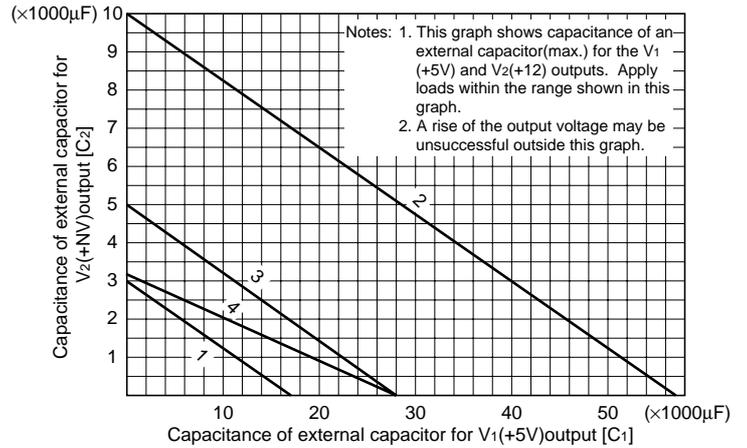

For example, use the following current in the case of a waveform shown below:

$$aT \leq 3(s)$$

$$\sqrt{aI_1^2 + (1-a)I_2^2} \leq 1.5(A)$$
