DESCRIPTION: The BASIC Stamp 1 Starter Kit includes a special BS1 Serial Adapter that allows you to program in the Windows environment. Prior to 2004, it was only possible to program the BS1 using a parallel cable in DOS. And now that the BS1-IC is less than $30 per module in low quantities, we're sure that you will find many opportunities to implement a BS1-IC. Its 8 I/O pins make it ideal for your more strightforward designs which don't demand a BS2-level microcontroller. Due to the small size (1.4"x.6"x.1") it's also perfect for fitting in tight applications.

BS1 Serial Adapter Makes it Easy
Upon receiving the kit, simply connect the BS1 Adapter as shown in the diagram at this link and connect the serial cable to the DB-9 port on the Super Carrier Board which is also included in the kit.
Special Note: The BASIC Stamp Manual v2.1 will show you that only a parallel cable is used for BS1 programming. If you have any questions please refer to the hyperlink above or contact Parallax technical support for assistance.

BS1 Starter Kit Parts Listing
The BASIC Stamp 1 Starter Kit includes the following:

- BS1-IC module
- BASIC Stamp Manual v2.1
- Super Carrier Board
- CD-ROM (software and documentation)
- BS1 Serial Adapter
- Serial Cable

A power supply is NOT included with this kit; If you're looking for a power supply, click here.
