

M0 - Prototype M-Module™

- Supports development of M-Modules™
- Prototyping
- Also suitable for small series

The M0 is a bare board with just the appropriate connectors for development of M-Module™ prototypes and small series.

The M0 is based on the M-Module™ ANSI mezzanine standard. It can be used as an I/O extension in any type of bus system, i.e. CPCI, PXI™, VME or on any type of stand-alone SBC. Appropriate M-Module™ carrier cards in 3U, 6U and other formats are available from MEN or other manufacturers.

M-Modules™ are an ANSI mezzanine standard for all kinds of real-world I/O functions. M-Modules™ are used

on a large variety of computing platforms such as CPCI, PXI™, VME, VXI, desktop PCI or on any other type of carrier card.

The M-Module™ concept is deliberately designed to allow specialized modules to be developed simply, quickly, and cheaply. These specialized development efforts can be undertaken by different vendors or by the customers themselves.
