

PMC-DX502/2002 Reconfigurable FPGA with Differential I/O

- PMC-DX502: 32 differential I/O, 500K gates
- PMC-DX2002: 32 differential I/O, 2M gates

PMC-DX502 and PMC-DX2002 modules provide users with the capability to implement complex, customized digital I/O board solutions. Application-specific logic routines and algorithms can be downloaded into the on-board reconfigurable FPGA to control operation of the I/O channels.

These modules are ideal for advanced differential RS422 I/O functions. Typical uses include hardware simulation, in-circuit diagnostics, and communication processing. Modules are able to generate recipe-based responses to input stimulus and to translate communication protocols.

Powerful and versatile, these PMC modules are designed around a reconfigurable FPGA, the Xilinx® Virtex®-II. The PMC-DX502 has the 500K-gate package, while the PMC-DX2002 uses the 2M-gate version. Both DSP-capable FPGAs feature versatile logic resources, large on-chip memories, and a high-speed interface.

The PCI bus interface is handled by a PLX® PCI 9056 device which provides 32-bit 66MHz bus mastering with dual-channel DMA support.

Features

- 32 bi-directional RS422 differential I/O lines
- Customizable FPGA with 500,000 or 2,000,000 gates (Xilinx Virtex-II XC2V500 or XC2V2000)
- FPGA code loads from PCI bus or flash memory
- 256K x 36-bit SRAM memory
- Supports dual DMA channel data transfer to CPU
- Supports both 5V and 3.3V signalling
- Extended temperature option (-40 to 85°C)

Download your own logic programs and algorithms into the on-board user-configured FPGA to quickly create a custom digital I/O module.

Specifications

FPGA

FPGA: Xilinx Virtex-II FPGA

PMC-DX502: XC2V500 FPGA with 500K system gates
 PMC-DX2002: XC2V2000 FPGA with 2M system gates

FPGA configuration: Downloadable via PCI bus or from flash memory.

Input/output signals: 32 differential lines.

Example FPGA program: VHDL provided implements interface to PCI bus IC, interface to SRAM, PLL control, and digital I/O control. Program requires user proficiency with Xilinx software tools. See Engineering Design Kit.

Digital I/O

I/O channel configuration: 32 bi-directional differential signals. Direction is controlled independently.

Differential driver output voltage with 50 ohm load: 2V minimum, 5V maximum.

Common mode output voltage: 3V maximum:

Minimum input resistance: 12K ohms.

Termination resistors: 120 ohm termination resistor networks are installed in sockets.

Engineering Design Kit

Provides user with basic information required to develop a custom FPGA program. Kit must be ordered with the first purchase of a PMC-DX module. See Page 54 for details.

PMC Compliance

Conforms to PCI Local Bus Specification, Revision 2.2 and CMC/PMC Specification, P1386.1.

Electrical/Mechanical Interface: Single-Width Module.

32-bit PCI Master: Implemented by PLX PCI 9056 device.

PCI bus clock frequency: 66MHz.

Signaling: 5V and 3.3V compliant.

Interrupts (INTA#): Interrupt A is used to request an interrupt.

Environmental

Operating temperature: 0 to 70°C or -40 to 85°C (E versions)

Storage temperature: -55 to 105°C.

Relative humidity: 5 to 95% non-condensing.

Power: Consult factory. Operates from 3.3V supply.

MTBF: Consult factory.

Ordering Information

PMC Modules

PMC-DX502: Differential I/O with 500K-gate FPGA

PMC-DX502E: PMC-DX502 with extended temp. range

PMC-DX2002: Differential I/O with 2M-gate FPGA

PMC-DX2002E: PMC-DX2002 with extended temp. range

PMC-DX-EDK: Engineering Design Kit (one kit required)

Software (see Page 81)

PMCSW-API-VXW: VxWorks® software support package

PCISW-API-QNX: QNX® software support package

PCISW-API-WIN: Windows® DLL software support

Accessories (see Page 87)

5025-288: Termination panel, SCSI-3 connector, 68 screw terminals

5028-432: Cable, shielded, SCSI-3 connector both ends
