

Programmable DC Power Source 62120 Series-12KW

Chroma 62120 Series of various output programmable DC power supplies are designed for use in ATE, burn-in, plating, and other high power systems for a broad range of Test & Measurement applications.

The 62120 Series of constant voltage, constant current power supplies are available in power ranges 12KW. All models have 10-turn voltage and current controls that vary the voltage (10V~600V) and current (20A~1200A) outputs from zero to the maximum rated values. The operation of crossover from constant voltage constant current occurs automatically when the load current exceeds the control setting. Also the provided adjustable current limit allows you to set the current limit without short-circuiting the output.

All 62120 Series Programmable DC Power Sources have incorporated modern power factor correction circuitry to increase the input power factor more than 0.95 to meet the IEC regulation that not only reduces the input current requirement but also raises the efficiency over 85%.

There are 100 user programmable input status on the front panel for automated test applications. In addition a 16-bit digital control with bright vacuum fluorescent display readout, bar graphs and status indicators is equipped for the real time measurement of voltage and current.

The 62120 Series DC Power Sources are very easy to operate either from the front panel keypad or from the remote controller via GPIB (optional) and RS-232 & APG (standard). Its compact size with 10.37" only can be stacked on a bench in a standard rack without any difficulty.

For quality and safety, the entire series of Model 62120 Programmable DC Power Sources are CSA, UL, and CE approved with standard over voltage protection (OVP) and thermal shutdown functions built-in; consequently make each of them a reliable instrument for components testing as well as new products development.

MODEL 62120 Series

Key Features:

- 10 models available for selection
- 3 phase, 208VAC input
- Digital encoder knobs, keypad and function keys
- Power Factor Correction (PFC)
- Embedded controller for front panel sequencing
- 16-bit digital processing
- LabView drivers
- Constant Power mode
- 10 store/recall locations and 99 step sequencing
- Remote sense, 5V line loss compensation
- Isolated analog programming
- Optional IEEE-488.2 GPIB control with SCPI and RS-232 standard interface
- OVP, current limit, thermal protection
- UL, CSA, CE approved

Chroma

SPECIFICATIONS :

All specifications are subject to change without notice.

Notes:

1. Minimum output voltage is <0.15% of rate voltage at zero output setting.
2. Minimum output current is <0.2% of rate current at zero output setting when measured with rated load resistance.
3. For input voltage variation over the AC input voltage range with constant rated load.
4. For 0-100% load variation with constant nominal line voltage.
5. Current mode noise is measured from 10% to 100% of rated output voltage, full current unit in CC mode
6. Typical efficiency at nominal input voltage and full output power.
7. Maximum drift over 30 minutes with constant line,load ,and temperature after power on.
8. Maximum drift over 8 hours with constant line,load ,and temperature after 30 minute warm-up.
9. Change in output per ^oC change in ambient temperature with constant line and load.

 A626001 : GPIB Interface for Model 6260/62120 Series
 A626003 : High Voltage 342-500Vac 3 Phase Input

General Specifications :

Operational AC Input Voltage : 190-242 Vac 3phase (47-63Hz) (standard)
 342-500 Vac 3phase (47-63Hz) (optional)
 Dimension Size (WxHxD) : 482.6x263.4x602.7 mm
 Operating Temperature Range : 0^oC ~ 50^oC
 Storage Temperature Range : -40^oC ~ +85^oC
 Transient Response Time : 20 ms (voltage mode)
 Maximum Remote Sense Line Drop Compensation : 5V/line
 Remote on/off and interlock : 4 to 15V signal or TTL-compatible input
 Remote Analog Programming : Voltage and current programming inputs 0-5V,
 0-10V(default) voltage sources,Input galvanically isolated from supply output.
 Remote Analog Monitoring : Voltage and current monitor outputs 0-5V, 0-
 10V(default) ranges for 0 to 100% of output, galvanically isolated from supply output.
 Remote Programming and Monitoring Accuracy : 0.3% of full scale output
 Front Panel Voltage Control Resolution : 0.002% with keypad
 Time Delay From Output Enable Until Output Stable : 5s maximum
 Isolation : 600Vdc (Output to Chassis)
 Switching Frequency : typical 31 kHz ; 62 kHz output ripple
