### 6. INSTRUCTIONS :

The set still works properly even if the either unit is removed. The removed unit cannot be use in other machinery nor for the other purpose. When one unit breaks down, it's LED will blink buzzer will sound. Push the Reset button and the buzzer will stop.

**Redundancy** Offer redundant function for power system and mutually backs up the outputs. A zero transfer time when backup takes place.

**Hot-Swap** The power system provides a hot-swap function. This means when either one of the redundant power supplies fails or breaks down, you can easily replace failed unit without any interference to the system.

**Buzzer** A warning buzzer sounds when any one of the power supplies fails. The warning buzzer is reset table from reset switch either the one in front control panel or the one on the rear side.

**LED's** The warning LED's can be found either on the rear side or the control panel of the power system. Tells if one of the two power supplies has failed, by LED blinking.

**Hot-Pluggable** The power system provides a Hot-pluggable function. This method allows the power units in the Disk Array/File Server to be removed or inserted very easily.
