

A new level of control.

Fusion™ Forecourt System

A man wearing a blue polo shirt and a brown belt is holding a tablet computer. The tablet screen displays the text "Control like you've never had it before." in a blue, sans-serif font. The background is plain white.

Control
like you've
never had
it before.

Now your dispensers, tank gauging system, price signs and back-end reporting can be seamlessly interfaced with your POS and ERP systems. All with one small, but very powerful solution.

The Fusion™ Forecourt System is packed with some of the most advanced software technology in the industry. Technology that gives you greater visibility into your most crucial systems, and the power to control those systems like you've never had before.

Need to seamlessly connect your existing retail POS system with your forecourt? No problem. Want real-time visibility into information that will help you make smarter business decisions? The Fusion system can do that too, anytime and from anywhere. Need to control your site from an easy-to-use console application? You've come to the right box. The Fusion Forecourt System is designed to address your current needs and adapt as those needs evolve.

But perhaps the most compelling benefit of a Fusion system is that it's connected to the experience, expertise and support of Wayne. Literally. Your Fusion Forecourt System can be supported with our enterprise remote-diagnostics software, which monitors forecourt dispenser equipment around the clock — and proactively identifies and resolves problems as they arise.

Control where you need it most.

Control where you need it most.

Control over costs

The Fusion™ Forecourt System gives you the control you need for much lower deployment and implementation costs. By giving you better visibility over many of your current devices with one single tool, maintenance costs are reduced, and there are fewer potential points of failure. You simply plug in the Fusion system, hook up your devices, and within minutes you have connection and control over your devices.

Control over complexity

By interfacing with multiple forecourt devices, as well as POS systems from multiple vendors, a Fusion system gives you one single point of control. This flexibility enables all of your key systems to speak the same language and provides you a single interface to:

- Fuel dispensers from multiple vendors
- Tank management systems
- Price signs
- POS systems

Control over data

With the Fusion system's in-depth web-reporting capabilities, you can get much better visibility into sales, operations, inventory and equipment. Which means you're better equipped to make smart business decisions. And with remote accessibility built in, it doesn't matter where you are or what time it is, you can find the information you need.

A single Fusion Forecourt System can replace your:

- Forecourt controller
- Petroleum-retail console
- Interface and distribution boxes
- Third-party proprietary controllers

need it most.

Control over clutter

The Fusion system provides all of this control in a single, streamlined solution designed specifically for the rugged demands of a petroleum-retail environment. With its solid-state construction, the Fusion system is built to withstand extreme temperatures and dust. And with all of the advanced technology packed into it, it's also built to handle your complete forecourt needs.

Control over your future

The Fusion system is designed to easily expand with your growing business needs. The system is flexible and upgradeable, so as your business needs continue to evolve, you can easily add software and hardware to keep up.

Control, centralized.

The Enterprise enabled remote diagnostic software can be included in your Fusion system warranty. What does that mean to you? It means you can get:

- 24/7 remote support for dispensers, systems and other technology
- Device monitoring and remote problem resolution
- Escalation notification
- Increased security for forecourt and network
- Data management
- Automatic software update installation

To learn more about all the tasks a Fusion system can do for you, go to waynefusion.com.

One platform. Three models of control.

Three models of control.

The Fusion™ Forecourt System is available in three models, each designed to address the needs of various site environments.

Fusion 1000

If you have an existing POS system, the Fusion 1000 system is an easy way to connect with the forecourt today, with expansion capability for future upgrades. This off-the-shelf box easily connects your POS and your dispensers, regardless of the manufacturer.

- Easily connects your POS to your forecourt devices
- Consolidates boxes — minimizes potential points of failure
- Easy to upgrade to the Fusion 3000 system — add capability without adding boxes

Fusion 3000

With on-site and remote connectivity, and comprehensive web-reporting features, the Fusion 3000 gives you better control and visibility over your fueling station. If you need automation without electronic payment or require POS redundancy, the Fusion 3000 system is the best choice for you.

- Console application with easy-to-use interface allows enhanced control of the dispenser, including prepayment and post-payment transactions
- Enables cash transactions and payment reconciliation
- In-depth web reporting gives you site data at your fingertips — in real time
- Web-enabled user interface lets you connect from remote locations and run any report
- Provides back-up console application for site redundancy in case of POS failure

Fusion 6000

Want full site automation with integration to third-party applications, plus electronic payment, both indoors and outdoors? Then you want the Fusion 6000 system. It includes everything in the Fusion 3000 system, plus it helps control aspects of electronic payments. In fact, the Fusion 6000 system even processes credit card transactions separate from the POS system, taking much of the complexity and cost out of PCI compliance.

- Enables electronic payment transactions without going through your POS system
- Enables payment and loyalty programs from a single system
- Easily accommodates third-party software applications, no need for extra boxes

Note: The Fusion 6000 system is a customized solution that requires a consultation with a Wayne representative to configure and set up — software and integration work is required.

One system. Many layers of control.

As station owners and operators, you like to be in control. Over your forecourt, your POS, your inventory, your margins — your entire operation. The Fusion™ Forecourt System can help. This single box ties your systems and devices together, giving you the information you need to make smart business decisions.
