

Mobile ESD Utility Carts

Rubbermaid® Mobile ESD Utility Carts comply with general electrostatic performance recommendations.

Flat Shelf Utility Carts (4505-45, 4525-45) have a convenient work surface and storage bins.

A common ground point connector provides extra protection.

Dissipative non-marking 5" diameter (12.7 cm) casters ensure easy maneuverability.

Rubbermaid's Mobile ESD Utility Carts – A Key Element in Your Total ESD Program.

The production of circuit boards, computer chips, and other electronic components has dramatically increased as the market for telecommunications equipment, computers and related products has soared. Manufacturing these sensitive electronic devices requires strict control of unwanted static charges within the production environment. Uncontrolled static discharges can destroy electronic components, interrupt production, and result in equipment field failures.

Rubbermaid Commercial Products has now engineered a line of carts in both Utility (4500-45, 4520-45) and Flat Shelf (4505-45, 4525-45) versions to meet the

stringent demands of the ESD workplace. The carts' surface resistance measures within the 10^6 to 10^9 ohms/sq range.* A common ground point connector, dissipative casters and a drag chain with a 1 ohm resistor are included for added protection. Molded completely of a unique low-sloughing, ESD resin, they are ideal for clean room environments.

These carts help meet the challenges of creating an ESD-safe environment and provide the commercial grade durability and user-friendly functionality you expect from Rubbermaid.
